Rapid7 can crawl and assess web applications to identify vulnerabilities with offerings on-premise and in the cloud. Rapid7's InsightAppSec assesses and reports on a web application's compliance to PCI-DSS, HIPAA, OWASP Top Ten, and other regulatory requirements. Integration with Atlassian Jira gives developers full visibility within their existing workflows while the Attack Replay feature lets developers validate vulns and test source code patches on their own.

GitLab Ultimate automatically includes broad security scanning with every code commit including Static and Dynamic Application Security Testing, along with dependency scanning, container scanning, and license management

## Feature Comparison

### Static Application Security Testing

CORE	STARTER	PREMIUM	ULTIMATE
FREE	BRONZE	SILVER	GOLD

GitLab allows easily running Static Application Security Testing (SAST) in CI/CD pipelines; checking for vulnerable source code or well known security bugs in the libraries that are included by the application. Results are then shown in the Merge Request and in the Pipeline view. This feature is available as part of **Auto DevOps** to provide security-by-default.

supports 18 languages

[Learn more about Static Application Security Testing](#)

### Secret Detection

CORE	STARTER	PREMIUM	ULTIMATE
FREE	BRONZE	SILVER	GOLD

GitLab allows you to perform Secret Detection in CI/CD pipelines; checking for unintentionally committed secrets and credentials. Results are then shown in the Merge Request and in the Pipeline view. This feature is available as part of **Auto DevOps** to provide security-by-default.

[Learn more about Secret Detection](#)

### Dependency Scanning

CORE	STARTER	PREMIUM	ULTIMATE
FREE	BRONZE	SILVER	GOLD

GitLab automatically detects well known security bugs in the libraries that are included by the application, protecting your application from vulnerabilities that affect dependencies that are used dynamically. Results are then shown in the Merge Request and in the Pipeline view. This feature is available as part of **Auto DevOps** to provide security-by-default.

[Learn more about Dependency Scanning](#)

### Container Scanning

CORE	STARTER	PREMIUM	ULTIMATE
FREE	BRONZE	SILVER	GOLD

When building a Docker image for your application, GitLab can run a security scan to ensure it does not have any known vulnerability in the environment where your code is shipped. Results are then shown in the Merge Request and in the Pipeline view. This feature is available as part of **Auto DevOps** to provide security-by-default.

[Learn more about container scanning](#)

### Dynamic Application Security Testing

CORE	STARTER	PREMIUM	ULTIMATE
FREE	BRONZE	SILVER	GOLD

Once your application is online, GitLab allows running Dynamic Application Security Testing (DAST) in CI/CD pipelines; your application will be scanned to ensure threats like XSS or broken authentication flaws are not affecting it. Results are then shown in the Merge Request and in the Pipeline view. This feature is available as part of **Auto DevOps** to provide security-by-default.

### Interactive Application Security Testing

CORE	STARTER	PREMIUM	ULTIMATE
FREE	BRONZE	SILVER	GOLD

IAST combines elements of static and dynamic application security testing methods to improve the overall quality of the results. IAST typically uses an agent to instrument the application to monitor library calls and more. GitLab does not yet offer this feature.

### Vulnerability Management

CORE	STARTER	PREMIUM	ULTIMATE
FREE	BRONZE	SILVER	GOLD

GitLab's vulnerability management is about ensuring assets and applications are scanned for vulnerabilities. It also includes the processes to record, manage, and mitigate those vulnerabilities.

Vulnerability management helps identify meaningful sets of vulnerabilities, in both your assets and application code, that can be mitigated, managed, and acted upon by your whole team—not just the security organization. It also provides a unified interface to the systems teams are already using for managing results from the “devops:secure” stage so there is always a single source of truth and single place for managing security results.

### Cloud Native Network Firewall

- CORE
- STARTER
- PREMIUM
- ULTIMATE
- FREE
- BRONZE
- SILVER
- GOLD

Cloud native network firewall provides container-level network micro segmentation which isolates container network communications to limit the “blast radius” of compromise to a specific container or microservice. A container-aware virtual firewall identifies valid traffic flows between app components in your cluster and limits damage by preventing attackers from moving through your environment when they have already compromised one part of it.

### License Compliance

- CORE
- STARTER
- PREMIUM
- ULTIMATE
- FREE
- BRONZE
- SILVER
- GOLD

Check that licenses of your dependencies are compatible with your application, and approve or deny them. Results are then shown in the Merge Request and in the Pipeline view.

### On-demand Dynamic Application Security Testing

- CORE
- STARTER
- PREMIUM
- ULTIMATE
- FREE
- BRONZE
- SILVER
- GOLD

“There’s no reason to wait for the next CI pipeline run to find out if your site is vulnerable or to reproduce a previously found vulnerability. GitLab offers scanning your running application with On-demand Dynamic Application Security Testing (DAST), independent of code changes or merge requests.”
